

Do you want to install [transparent] solar panels on the roof of your home, veranda or conservatory?

Sanko Solar offers the best solution!

Are you considering having solar panels installed but still hesitating because of the effect on your home's appearance? Or are you going to build a veranda or conservatory? If so, you will be interested in hearing more about the CdTe thin-film solar panels from Sanko Solar. These panels are slimmer than conventional panels, lack a prominently visible aluminium frame and there is no visible block pattern. They allow you to benefit from free energy from the sun without adversely affecting your home's appearance or the appearance of your veranda or conservatory. The panels are available in transparent and opaque versions. The opaque panels are ideal for use on an inclined or flat roof.

Transparent solar panels

Do you want to build a veranda, conservatory, canopy roof or carport? And generate electricity at the same time? The CdTe thin-film transparent solar panels from Sanko Solar are partially transparent, provide protection from the sun and are attractively priced. Our panels are characterised by their high quality and attractive styling. Our transparent solar panels for verandas are available in the following versions: standard, as (high efficiency) double glazing and as triple glazing. We use the panels to create your veranda, conservatory or canopy roof in any size and to any style. We integrate all of the wiring and the junction box invisibly in the framework.

Sanko Solar

Sanko Solar delivers high-quality thin-film solar panels. Because our panels use the most advanced solar energy technology available, they offer exceptionally high efficiency. Do you want to reduce your energy bill without adversely affecting the appearance of your home? The solar panels from Sanko Solar make this possible.

Sanko Solar specifies, designs and delivers complete solar power generation systems and, if required, we can also arrange installation for you. Purchasing solar panels from Sanko Solar guarantees you the most stylish high-quality solar panels available at an attractive price.

Benefits of thin-film solar panels

- Panel offering the best performance according to the PVGIS website!
- Lower purchase price and shorter payback time.
- Attractive appearance due to the lack of a peripheral aluminium frame.
- Smooth surface reduces the accumulation of dirt.
- Less sensitive than other types of solar panel to south-facing orientation and the angle of inclination; suitable for a more extensive range of applications.
- Fully recyclable.
- More environmentally friendly than crystalline panels due to lower energy costs and reduced CO₂ emissions during production.
- No performance loss caused by shadow effects.

Sanko Solar offers you the following guarantees for its solar panels:

- 10-year warranty on materials and workmanship.
- A guaranteed power output of 90% during the first 10 years.
- A guaranteed power output of 80% from the 10th to the 25th year of use.
- TÜV certified panels.
